Full-stack developer keeping 60,000 promotional products in sync across BigCommerce, Shopify and WooCommerce, and running the multi-tenant AI mockup service those storefronts use. Builds independent macOS and iOS products on the side, with a coding-agent practice built on written briefs, review gates, and tests agents have to pass before anything ships.

EXPERIENCE

AB Web Developers

JUN 2024 — PRESENT

Full Stack Developer

- Built and maintain an integration layer syncing a promotional-products PIM to BigCommerce, Shopify and WooCommerce — 60,000 products across ~18 storefronts, alongside 4–6 other developers.
- Designed and shipped a multi-tenant AI mockup platform: server-side model-key custody, per-client quotas and cost metering, role-guarded access, Postgres + S3 storage.
- Reduced bulk export time by ~40% with per-platform rate limiting and incremental sync.

Healthengine

FEB 2024 — APR 2024

Web Support

- Maintained a 10/10 NPS diagnosing appointment-connector and remote-connectivity issues across phone, chat and ticket queues for a healthcare appointment platform.

Cloudcon

AUG 2023 — DEC 2023

Software Developer Intern

- Delivered React Native app work for Android and iOS alongside ASP.NET/C# services using AWS Lambda, ECS Fargate, KMS and S3.

INDEPENDENT PRODUCTS

heyMate — macOS AI companion

- Agents produce a read-only plan before write access; provider API keys are scrubbed from the agent's child process to prevent silent metered billing.

BinMate — Perth bin-day iOS app

- 541 backend tests across 46 suites, CI on every pull request, direct APNs push (HTTP/2, ES256).

RepFlow — BigCommerce commission app

- OAuth install, HMAC-validated webhooks, multi-user JWT callbacks. Live; marketplace listing in review.

EDUCATION

Bachelor of Information Technology — Software Development
